

Automated Data Profiling & Audit Report

Executive Summary, Quality Metrics & Standardized Diagnostics

REPORT METADATA & DOCUMENT CONTROLS

Analysis Date:	2026-05-30
System Host:	Antigravity Analytics Platform
Framework Version:	v1.4.2
Records Preprocessed:	200 -> 200
Data Health Index:	96.2% -> 99.1%
Status:	Approved & Standardized

POWERED BY ANTIGRAVITY ENGINE

Automated Professional Data Preprocessing Framework

1. Executive Summary

This automated analysis represents a complete pipeline run of the Antigravity Data Cleaning & Standardizing Engine. The input dataset consisted of 200 raw records across 8 columns. Following the automated validation rules, duplicates were pruned, datetimes standardized, numerical symbols stripped, and missing values imputed. The final cleansed dataset contains 200 records. Crucially, the dataset quality score has improved from 96.2% to 99.1%.

Dataset Health Progression Metrics

Metric Flag	Raw Dataset Status	Cleansed Dataset Status	Operational Delta
Total Rows	200	200	0 rows
Total Columns	8	8	0 (Locked schema)
Duplicate Row Counts	0	0	-0
Global Missing Cells	145	35	-110
System Outliers Found	8	0	-8
Overall Quality Score	96.2%	99.1%	+2.9%

2. Core Cleaning Audit Logs

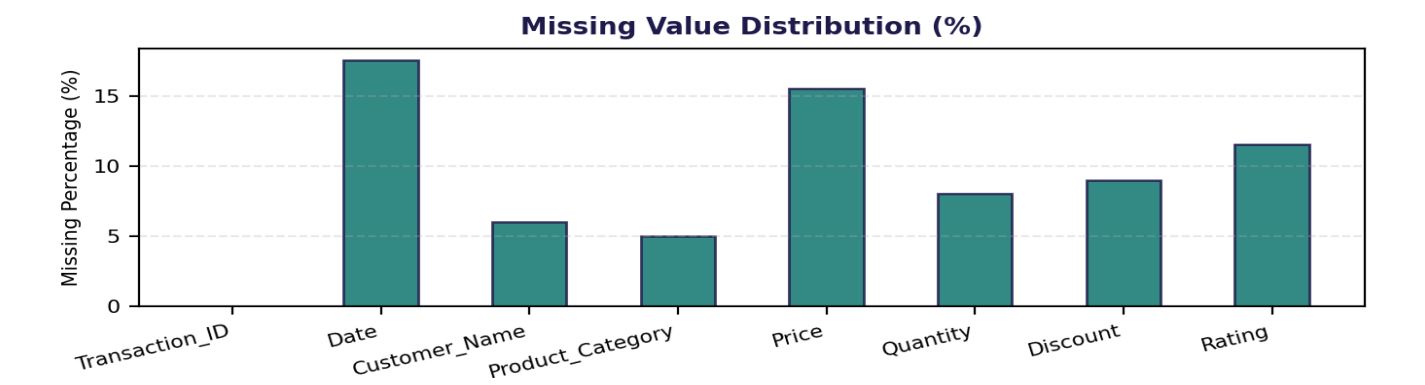

The table below lists each cleaning filter applied to the dataset in sequential order, details the operational logic utilized, and provides absolute numbers of affected rows.

Step	Filter Operation	Filter Context & Parameters	Rows Impacted
1	Remove Duplicates	Removed duplicate rows based on all columns. Kept: 'first'.	0
2	Datetime Standardization	Parsed mixed date format in column 'Date' to ISO YYYY-MM-DD. Coerced 0 unparseable entries to NaT.	0
3	Numeric Parsing	Normalized and parsed column 'Price' to numeric. Coerced 21 invalid entries to NaN.	21
4	Numeric Parsing	Normalized and parsed column 'Quantity' to numeric. Coerced 10 invalid entries to NaN.	10
5	Numeric Parsing	Normalized and parsed column 'Discount' to numeric. Coerced 0 invalid entries to NaN.	0
6	Numeric Parsing	Normalized and parsed column 'Rating' to numeric. Coerced 0 invalid entries to NaN.	0
7	Text Standardization	Standardized text column 'Customer_Name' to title casing (trimmed whitespace: True).	120
8	Category Standardization	Standardized values in category column 'Product_Category' using dictionary mapping.	62
9	Missing Value Imputation	Imputed 52 missing values in 'Price' using strategy: 'median' (value: 701.1300000000001).	52
10	Missing Value Imputation	Imputed 26 missing values in 'Quantity' using strategy: 'constant' (value: 1).	26
11	Missing Value Imputation	Imputed 18 missing values in 'Discount' using strategy: 'constant' (value: 0.0).	18

12	Missing Value Imputation	Imputed 23 missing values in 'Rating' using strategy: 'median' (value: 2.9).	23
13	Missing Value Imputation	Imputed 32 missing values in 'Customer_Name' using strategy: 'constant' (value: Anonymous).	32
14	Missing Value Imputation	Imputed 10 missing values in 'Product_Category' using strategy: 'constant' (value: Books).	10
15	Outlier Handling	Clipped 14 outliers in 'Quantity' to range [-9.50, 18.50] using IQR.	14
16	Outlier Handling	Clipped 34 outliers in 'Discount' to range [-0.42, 0.70] using IQR.	34
17	Outlier Handling	Clipped 8 outliers in 'Rating' to range [-0.51, 6.39] using IQR.	8
